Anchor Tag

- Little discussion about anchor tag related to “target” attribute

Prepared BY: Ehtisham Rasheed

HTML Styles

- The HTML **style** attribute is used to add styles to an element, such as color, font, size, and more.
- The HTML **style** attribute has the following syntax:

```
<tagname style="property:value;">
```

- The **property** is a CSS property. The **value** is a CSS value

Background Color

- The CSS **background-color** property defines the background color for an HTML element.
- Example
 - Set the background color for a page to powderblue

```
<body style="background-color:powderblue;">
```

Text Color

- The CSS **color** property defines the text color for an HTML element
- Example

```
<h1 style="color:blue;">This is a heading</h1>  
<p style="color:red;">This is a paragraph.</p>
```

Text Size

- The CSS **font-size** property defines the text size for an HTML element
- Example

```
<h1 style="font-size:300%;">This is a heading</h1>  
<p style="font-size:160%;">This is a paragraph.</p>
```

- Font-size without percentage.

Text Align

- The CSS **text-align** property defines the horizontal text alignment for an HTML element
- Example

```
<h1 style="text-align:center;">Centered Heading</h1>  
<p style="text-align:center;">Centered paragraph.</p>
```

- How to use multiple styles with one html tag
